PROFESSIONAL SUMMARY

Transformation and program lead with 13+ years of experience across regulated life sciences, digital product strategy, cross-functional operational transformation, and finance-aware delivery planning. Strong background in shaping target-state operating models, governance structures, process architectures, and integration-led solutions across quality-sensitive environments, with practical experience aligning business, operations, IT, procurement, finance, and vendor stakeholders. Brings hands-on experience in forecasting, budgeting, forecast-versus-actual tracking, pricing-model design, and business-case development, combined with direct AI-enabled workflow, retrieval, and knowledge-tool building in TypeScript, Swift, and local-first architectures.

CORE COMPETENCIES

Program Governance and Cadence | Cross-Functional Delivery Leadership | Forecasting and Budget Planning | Forecast-versus-Actual Analysis | Requirements and Roadmap Translation | Agile Delivery and Release Coordination | Stakeholder Communication | AI-Enabled Workflow Design

WORK EXPERIENCE

BioNTech SE

May 2023 - Present

Digitalisation Lead for Product Supply of Individualized Medicine

- Lead digitalisation design for product supply of individualized medicine, defining target-state processes, system interaction models, and integration requirements across sample processing, genomics, manufacturing, quality, and enterprise functions.
- Develop BPMN-oriented process models and capability views covering execution logic, traceability checkpoints, exception paths, system responsibilities, and decision points across laboratory, automation, quality, and enterprise functions.
- Develop stakeholder, system, and capability landscape views to clarify ownership, dependencies, inputs, outputs, and control points across the operating model.
- Drive cross-functional alignment across operations, QA, QC, engineering, automation, IT, and supply chain to translate business needs into clear process and system requirements.
- Develop executive-ready architecture and operating model communication artefacts, including layered system landscapes, stakeholder views, and black-box orchestration diagrams.

Elsevier Life Science Solutions

Apr 2019 - Apr 2023

Digital Compliance and Product Strategy Lead

- Led digital quality, compliance, product management, and cross-functional delivery initiatives for regulated life sciences SaaS platforms serving pharmaceutical and biotech organizations.
- Balanced product strategy with regulatory governance by shaping validated processes, release approaches, roadmap inputs, and product capabilities in regulated environments.
- Translated regulatory, customer, and operational needs into product requirements, prioritization inputs, and roadmap decisions for regulated SaaS offerings.
- Partnered with product, operations, and IT teams to improve governance, information security alignment, release readiness, and delivery effectiveness.
- Coached product teams in Lean and Agile ways of working to improve prioritization, delivery clarity, program discipline, and product maturity.

Tata Consultancy Services

May 2011 - Apr 2018

Consultant and Project Manager, Pharma Transformation and Advisory

- Managed cross-functional workstreams supporting clinical operations, process improvement, regulatory readiness, and structured delivery objectives in regulated client environments.
- Prepared quarterly forecasts and approval inputs for delivery costs, compared forecasted versus actual spend, and maintained working models to support planning accuracy, variance discussions, and decision-making across delivery, finance, procurement, and account stakeholders.
- Developed an internal forecasting and prediction model for resource and cost planning to improve visibility into expected versus realized effort and spend across different project scenarios.
- Designed an activity-based pricing model for a major pharmaceutical client to support the transition from hourly billing toward activity-based commercial structuring, and built the business case used to secure approval for future master service agreement discussions.
- Progressed from leading 7 associate consultants to managing 3 team leads across planning, delivery oversight, stakeholder alignment, issue resolution, and execution consistency across multiple workstreams.

SELECTED PROJECTS

InfoWeave-MemoryDB

Architect / Builder | 2026

- Built a local vector memory database and MCP-compatible memory layer using TypeScript, SQLite, and local embeddings.
- Focused on persistent, searchable, privacy-conscious memory infrastructure for AI tools and agentic workflows.

Knowledge Graph Tools

Product Architect / Builder | 2025-2026

- Designed and prototyped knowledge graph tools across native macOS and web-based implementations.
- Explored graph visualization, AI-assisted navigation, and structured knowledge patterns for connected information systems.

GraphCraft / GraphCraft-BPMN / Text-to-Draw.io

Product Architect / Builder | 2025-2026

- Designed and built AI-assisted diagramming tools that convert natural language into structured diagrams, including BPMN and draw.io-compatible outputs.
- Worked across TypeScript architecture, semantic DSL design, rendering workflows, layout handling, XML generation, and export paths.

MindMemo / SecondBrain / memory-vault

Product Designer / Builder | 2025-2026

- Built AI-powered note and memory assistant concepts with semantic retrieval, document chat, and durable markdown-based knowledge organization.

EDUCATION

Post Graduate Diploma in Business Administration - Narsee Monjee Institute of Management Studies (2012 - 2015)
Master of Science in Biotechnology - Sardar Patel University (2008 - 2010)

CERTIFICATIONS

Six Sigma Green Belt Certified and Black Belt Trained
GAMP 5 Practitioner
ISO 9001:2015 Lead Auditor / Internal Auditor
ICH E6(R3) Good Clinical Practice
ICH Q7 Good Manufacturing Practice Guide

SKILLS

Governance and Delivery: program governance, delivery planning and coordination, dependency and risk tracking, stakeholder communication, requirements management, prioritization support, release readiness, Lean and Agile enablement

Finance and Commercial: forecasting and budgeting support, forecast-versus-actual analysis, cost planning, commercial tracking, activity-based pricing model design, business-case development

Systems and Transformation: operating model design, system interaction modelling, capability mapping, BPMN, integration architecture, traceability design, cross-functional process design

AI and Product: AI-enabled workflow design, semantic search, vector retrieval, local embeddings, knowledge graph tooling, document intelligence, TypeScript, Swift, Node.js, React, SQLite, PostgreSQL

Languages: English (bilingual / native-level), Hindi (bilingual / native-level), German (basic proficiency), Marathi
